What are Batten Strips?

Batten Strips are a simple, cost-effective solution to restore R-Value to walk-ins from ice or condensation at the joints. Applications include walls, ceilings, corners and the base of the walk-ins to defend against vapor infiltration, condensation development and icing in panel joints.

Do I need Batten Strips?

Check the panel joints of your walk-in to see if there is swelling or separation occurring. Over time, condensation, frost and ice buildup can cause decreased performance, increased energy costs and a shorter life for walk-in coolers and freezers.
